Help us study how people communicate!
RECRUITING ADOLESCENTS AGES 12-17

What are the goals?
How we communicate – our body language, tone, expression – says just as much as our words. This study compares how people with different backgrounds and medical conditions use language and non-verbal methods to interact.

Who can be a part of the study?
If you or your child are 12-17, you may be eligible. We are looking for typically developing children as well as children who are diagnosed with ADHD, Anxiety Disorder, Autism, Bipolar Disorder, Depression, or Oppositional Defiant Disorder.

What is involved in this study?
You will complete one longer visit or a few shorter virtual visits, where you will meet with our clinicians and research team. During this visit you will play games and talk with our research staff. All participants will also receive a full psychological work-up, including behavioral testing for ADHD, anxiety, autism, and mood disorders.

How are participants compensated?
Participants and their parents are paid for their time completing the virtual visit as well as for time spent completing questionnaires. Each participant also receives a full psychological report and personalized feedback with recommendations.

I want to help! Who do I call?
If you are interested in participating in the study or want to learn more about it, please contact:
