HAVE A CHILD WITH AUTISM AND A NEW BABY? GET PAID TO PARTICIPATE IN RESEARCH FROM HOME!

We are actively recruiting 250 infants who have older siblings with autism to participate in brain and behavior development research. Participation occurs when infants are 6-months, 12-months, and 24-months old.

WHO DO WE NEED?

• Families who have a child or children with autism and a new baby 6-months of age or younger
• Infants and child with autism must share same mom and dad

WHAT DO YOU GET?

• A detailed results report of your infant’s development

WHATS THE POINT?

• Identify autism earlier
• Earlier identification means earlier intervention and improved outcomes

During the uncertain time of the COVID virus, we are currently not completing all components of this study in-person. However, we would very much like to include new families performing as much of our research as possible. This would include questionnaires completed online and phone interviews.

I WANT TO HELP!
WHO DO I CALL?
