WHAT ARE THE GOALS?
The goal of this study is to observe the differences in social communication development between children who have a sibling with autism and those whose sibling does not have autism.

WHAT WILL PARTICIPANTS BE ASKED TO DO?
• Make up to 4 visits to CHOP
• Complete simple motor and social interaction tasks
• Participate in expert developmental assessment

WHO CAN BE PART OF THIS STUDY?
Children ages 6-12 months who have an older biological sibling with autism or an older biological sibling without autism.

WHAT WILL PARTICIPANTS RECEIVE IN THIS STUDY?
Families will receive reports summarizing results of their child’s developmental testing and compensation for their time, mileage, and a meal.
